Education

University of Science, VNU-HCM — Ho Chi Minh City, Vietnam
Bachelor — Computer Science — *Sep. 2024 – Expected 2028*
Advanced Program in Computer Science (APCS), GPA: 3.6/4.0

Honors & Awards

Third Prize – AI Challenge Ho Chi Minh City 2026
- Awarded by Department of Science and Technology of Ho Chi Minh City

Third Prize (Top 3) – Vietnamese Student HackAIthon 2026
- Awarded by the Vietnam Student Association

Third Prize – Vietnam National Mathematics Olympiad 2024
- Awarded by the Ministry of Education and Training of Vietnam

Bronze Medal – Vietnam Mathematical Olympiad for Students 2023
- Awarded by the Vietnam Institute for Advanced Study in Mathematics (VIASM)

Silver Medal – Coastal and Red River Delta Mathematical Olympiad 2022
- Awarded by the Coastal and Red River Delta Specialized High Schools Association

Experience

Undergraduate Research Assistant — November 2025 – Present
University of Science, VNU-HCM — *Ho Chi Minh City, Vietnam*
- Conducted literature review on discrete diffusion models and masking strategies for LLM.
- Analyzed existing methods to identify research gaps and inform new masking approaches.
- Collaborated on early-stage ideation for a research paper.

Projects

FastMCQ Agent | *Python, Docker, LLM, OpenRouter, NLP* 2026
- Developed a Vietnamese multiple-choice question answering agent for Student HackAIthon 2026 under fixed model and compute constraints
- Designed a selective reasoning pipeline with a base predictor, option-permutation debiasing, symbolic solvers, evidence modules, and conservative answer selection

PulseLens | *Python, FastAPI, LangGraph, React, TypeScript, Supabase* 2026
- Built an evidence-backed market intelligence workspace using a 14-node multi-agent pipeline for live data collection, fact extraction, verification, sentiment scoring, and report generation
- Implemented a React analyst interface with signal radar, evidence explorer, company lens, pricing intelligence, and grounded RAG chat

DepGuard AI | *FastAPI, React, Multi-Agent Systems, AST Parsing, Tree-sitter* 2026
- Created an autonomous multi-agent dependency maintenance system that scans project dependencies, detects CVEs and outdated packages, and analyzes changelogs for breaking changes
- Designed specialized agents for dependency scanning, vulnerability monitoring, code patching, project checking, and automatic repair to keep projects secure and buildable

Technical Skills

Languages: Python, C/C++, Rust, JavaScript/TypeScript, SQL, HTML/CSS
Frameworks: React, Node.js, FastAPI, Tailwind CSS, Supabase
AI/ML: PyTorch, LangChain, LangGraph, RAG, Multi-Agent Systems, OpenRouter
Developer Tools: Git, Docker, Linux, VS Code, Google Colab, Figma
